Problem: A

company issues bonds with a face value of \$100,000, a stated rate of 6%, payable semiannually. The bonds are issued at a premium, and the market rate is 5%. Calculate the bond's issue price, record the journal entry for issuance, and determine interest expense for the first period.

Step 1: Identify key data: Face value: \$100,000
Coupon rate: 6%
Market rate: 5%
Payment frequency: semiannual
Premium: because coupon > market rate

Step 2: Calculate present value of bonds: Use present value of annuity for interest payments
Use present value of lump sum for face value

Step 3: Perform calculations: Interest payment = $\$100,000 \times 6\% / 2 = \$3,000$
Present value of interest = $\$3,000 \times \text{annuity factor}$
Present value of face value = $\$100,000 \times \text{lump sum factor}$

Step 4: Record journal entry: Debit Cash for issue price
Credit Bonds Payable for face value
Record premium as part of bonds payable

Step 5: Calculate interest expense: Use effective interest method: Interest expense = carrying amount $\times$ market rate per period

This example demonstrates the detailed approach needed for solving BE10 2 problems effectively.

Understanding WileyPlus Accounting Answers CH 10 BE10 2: A Comprehensive Guide
When navigating the complex world of accounting coursework, students often turn to online solutions like WileyPlus to help clarify concepts and verify their work. One common query involves WileyPlus Accounting Answers CH 10 BE10 2, a specific problem that many students encounter while studying financial accounting principles. In this guide, we'll thoroughly analyze this problem, break down its components, and provide a clear understanding of how to approach similar questions confidently.

What Is WileyPlus Accounting Answers CH 10 BE10 2?
Before diving into the specifics, it's essential to understand what this reference entails. The notation indicates: WileyPlus: An online platform offering homework, practice questions, and solutions related to Wiley's textbook

series. Chapter 10: The chapter in question, likely covering a particular accounting topic such as long-term liabilities, bonds payable, or stockholders' equity. BE10 2: The second problem in the "BE" (end-of-chapter) exercises, possibly labeled as "Business Exercise 10-2" or similar. This problem typically involves applying theoretical knowledge to practical scenarios, requiring calculations and journal entries related to accounting for bonds, lease obligations, or other financial instruments. Why Is Mastering Chapter 10 Important? Chapter 10 in most accounting textbooks often deals with long-term liabilities, including: Bonds payable, Notes payable, Lease obligations. Understanding these concepts is key for students aiming to grasp how companies finance their operations, record debt, and report liabilities on their financial statements. Step-by-Step Approach to WileyPlus CH 10 BE10 2: Carefully Read the Problem Statement. Begin by thoroughly reading the problem. Identify: The type of liability involved (e.g., bonds, notes, lease). The key figures provided (e.g., principal amount, interest rate, market rate, maturity date). The specific task: Is it calculating issuance price, interest expense, amortization, or preparing journal entries? Tip: Highlight or underline critical data and question prompts. Understand the Underlying Concepts. Before jumping into calculations, ensure you understand the core concepts: Bond issuance at face value vs. at a discount or premium. Interest calculations (coupon vs. effective interest). Amortization methods (straight-line vs. effective interest method). Journal entries for bond issuance, interest payments, and amortization. Identify the Required Calculations or Entries. The problem may ask you to: Calculate the bond's issue price. Record journal entries for issuance, interest payments, and amortization. Determine the bond's carrying amount over time. Calculate the effective interest expense. List out the specific deliverables to stay organized. Gather Necessary Formulas and Data. Depending on the task, you'll need formulas such as: Issue price of bonds (using present value of future cash flows) $\text{Issue Price} = \text{Present value of future interest payments} + \text{Present value of face value}$. Interest expense (effective interest method) $\text{Interest Expense} = \text{Carrying amount at beginning of period} \times \text{market rate}$. Amortization of premium or discount $\text{Amortization} = \text{Interest expense} - \text{Cash interest paid}$. Gather the relevant data: face value, stated interest rate, market rate, periods, and payment frequency. Detailed Breakdown of Typical Bond Accounting Problem (Based on CH 10 BE10 2). Let's simulate a typical problem and walk through the process. Scenario: A company issues \$100,000 face value bonds with a stated rate of 6%, payable semiannually. The market rate (effective rate) is 8%. The bonds are issued on January 1. Objective: Calculate the issuance price, record the journal entry for issuance, and prepare the first interest payment journal entry, considering amortization. Calculate the Present Value of Bonds. Step A: Find the Present Value of the Interest Payments. $\text{Semiannual interest payment} = \$100,000 \times 6\% \div 2 = \$3,000$. Number of periods = $2 \times \text{number of years (assume 10 years)} = 20$ periods. Step B: Find the Present Value of the Principal (Face Value). Discount rate per period = $8\% \div 2 = 4\%$. Present value of face value = $\$100,000 \times \text{PV factor for 20 periods at 4\%}$. Present value of interest payments = $\$3,000 \times \text{PV annuity factor for 20 periods at 4\%}$. Use present value tables or financial calculator for PV factors. Example (using approximate factors): PV of \$1 for 20 periods at 4% ≈ 0.4564 . PV of an annuity of \$1 for 20 periods at 4% ≈ 13.5903 . Calculations: PV of face value = $\$100,000 \times 0.4564 \approx \$45,640$. PV of interest payments = $\$3,000 \times 13.5903 \approx \$40,770$. Issue Price: Total = $\$45,640 + \$40,770 \approx \$86,410$. This indicates the bonds are issued at a discount because the issue price is less than face value. Record the Bond

Issuance Journal Entry: Debit Cash for the issue amount (\$86,410) Debit Discount on Bonds Payable for the difference (\$13,590) Credit Bonds Payable for the face amount (\$100,000) Calculate Interest Expense and Amortization for the First Period Interest Payment: Cash paid = \$3,000 Interest Expense (Effective Interest Method): Carrying amount at issuance = \$86,410 Interest expense = $\$86,410 \times 8\% \div 2 = \$3,456.40$ Amortization of Discount: = Interest expense ? Cash interest paid = \$3,456.40 ? \$3,000 = \$456.40 Adjusting Carrying Amount: New carrying amount = previous carrying amount + amortized discount = $\$86,410 + \$456.40 = \$86,866.40$ Record the Interest Payment and Amortization Journal Entry: Debit Interest Expense for \$3,456.40 Credit Discount on Bonds Payable for \$456.40 Credit Cash for \$3,000

Final Thoughts and Tips Master the present value calculations, as they form the basis for bond valuation. Understand the difference between cash interest paid and interest expense recognized. Practice journal entries for issuance, interest payments, and amortization to become fluent. Use financial calculators or spreadsheet functions to streamline PV calculations. Review key concepts like bond premiums, discounts, and effective vs. straight-line amortization.

By breaking down the problem into manageable steps?reading carefully, understanding what's asked, calculating present values, and recording journal entries?you can confidently approach similar exercises.
