Fundamentals of Oracle SQL: Setting the Stage

Before exploring exercises, ensure you are familiar with core Oracle SQL concepts:

- Data Types:** NUMBER, VARCHAR2, DATE, etc.
- Basic Commands:** SELECT, INSERT, UPDATE, DELETE
- Clauses:** WHERE, ORDER BY, GROUP BY, HAVING
- Joins:** INNER JOIN, LEFT JOIN, RIGHT JOIN, FULL OUTER JOIN
- Functions:** Aggregate (SUM, COUNT, AVG), String (CONCAT, SUBSTR), Date functions

Understanding these fundamentals sets the foundation for tackling more advanced exercises.

Basic Oracle SQL Exercises and Solutions

Exercise 1: Retrieve All Employees
Problem: List all columns for every employee in the `employees` table.
Solution: `SQL> SELECT * FROM employees;`
Explanation: The `SELECT \*` statement fetches all columns and records from the `employees` table, providing a complete overview.

Exercise 2: Find Employees with Salary Above 50,000
Problem: Write a query to find employees earning more than 50,000.
Solution: `SQL> SELECT employee_id, first_name, last_name, salary FROM employees WHERE salary > 50000;`
Explanation: The `WHERE` clause filters records where the `salary` exceeds 50,000, selecting relevant columns for clarity.

Intermediate Exercises: Exploring Joins and Aggregates

Exercise 3: List Employee Names with Department Names
Problem: Retrieve employee names along with their department names. Assume two tables: `employees` and `departments`, linked by `department\_id`.
Solution: `SQL> SELECT e.first_name, e.last_name, d.department_name FROM employees e JOIN departments d ON e.department_id = d.department_id;`
Explanation: An `INNER JOIN` combines records from both tables where the `department\_id` matches, presenting a comprehensive view of employees and their departments.

Exercise 4: Count Employees in Each Department
Problem: Determine how many employees work in each department.
Solution: `SQL> SELECT d.department_name, COUNT(e.employee_id) AS employee_count FROM departments d LEFT JOIN employees e ON d.department_id = e.department_id GROUP BY d.department_name;`
Explanation: The `LEFT JOIN` ensures all departments are listed, even those without employees. `GROUP BY` aggregates counts per department.

Advanced Exercises: Complex Queries and Subqueries

Exercise 5: Find Employees Who Earn More Than the Average Salary
Problem: List employee IDs and names for those earning above the average salary across all employees.
Solution: `SQL> SELECT employee_id, first_name, last_name, salary FROM employees WHERE salary > (SELECT AVG(salary) FROM employees);`
Explanation: The subquery computes the overall average salary, and the outer query filters employees earning more than this average.

Exercise 6: Retrieve the Top 3 Highest Paid Employees
Problem: List the top three employees with the highest salaries.
Solution: `SQL> SELECT employee_id, first_name, last_name, salary FROM (SELECT employee_id, first_name, last_name, salary FROM employees ORDER BY salary DESC) WHERE ROWNUM <= 3;`
Explanation: The inner query orders employees by salary in descending order. The outer query uses `ROWNUM` to limit results to the top three.

Handling Data Manipulation with Exercises

Exercise 7: Increase Salaries by 10% for Employees in a Specific Department
Problem: For employees in department 50, raise their salary by 10%.
Solution: `SQL> UPDATE employees SET salary = salary * 1.10 WHERE department_id = 50;`
Explanation: The `UPDATE` statement modifies salaries directly, applying a

10% increase where the department matches.

Exercise 8: Insert a New Employee Record
Problem: Add a new employee named John Doe, with specified details.
Solution: `INSERT INTO employees (employee_id, first_name, last_name, email, hire_date, job_id, salary, department_id) VALUES (207, 'John', 'Doe', '[email protected]', SYSDATE, 'IT_PROG', 6000, 60);`
Explanation: The `INSERT INTO` statement adds a new record with the specified values. `SYSDATE` inserts the current date.

Optimizing and Troubleshooting Exercises
Exercise 9: Find Duplicate Employee Emails
Problem: Identify email addresses that appear more than once in the `employees` table.
Solution: `SELECT email, COUNT(*) AS occurrence FROM employees GROUP BY email HAVING COUNT(*) > 1;`
Explanation: The `GROUP BY` groups entries by email, and `HAVING` filters for duplicates.

Exercise 10: Delete Employees with No Department Assigned
Problem: Remove all employees who are not assigned to any department.
Solution: `DELETE FROM employees WHERE department_id IS NULL;`
Explanation: The `DELETE` statement removes records where `department_id` is null, cleaning up unassigned entries.

QuestionAnswer

What are some common Oracle SQL exercises for beginners to practice basic SELECT statements?
 Beginner exercises often include retrieving all records from a table using `SELECT`, filtering data

with WHERE clauses, sorting results with ORDER BY, and practicing simple aggregate functions like COUNT, SUM, MIN, and MAX.

How can I practice writing Oracle SQL queries involving JOINS?

Practice exercises that involve combining data from multiple tables using INNER JOIN, LEFT JOIN, RIGHT JOIN, and FULL OUTER JOIN help improve understanding of table relationships. For example, retrieving customer orders along with customer details across related tables.

What are some solutions for practicing Oracle SQL subqueries and nested queries?

Exercises include writing subqueries within WHERE clauses to filter data, using subqueries in FROM clauses (inline views), and applying nested SELECT statements to solve complex filtering problems, such as finding employees earning above the average salary.

How do I solve Oracle SQL exercises involving GROUP BY and HAVING clauses?

Practice problems involve aggregating data, like calculating total sales per region, then filtering groups with HAVING (e.g., groups with total sales exceeding a certain amount). Solutions typically include GROUP BY and HAVING clauses combined with aggregate functions.

What are some common solutions for practicing Oracle SQL data manipulation commands?

Exercises include performing INSERT, UPDATE, and DELETE operations on tables, with solutions demonstrating transaction control, handling constraints, and ensuring data integrity during modifications.

How can I improve my skills with Oracle SQL window functions through exercises?

Practice involves using ROW_NUMBER(), RANK(), LEAD(), LAG(), and aggregate functions over partitions to perform calculations across sets of rows within a result set, such as ranking salespeople within regions or calculating moving averages.

Where can I find comprehensive solutions for advanced Oracle SQL exercises?

Online platforms like SQLZoo, LeetCode, and official Oracle tutorials provide exercises with detailed solutions. Additionally, books and courses on SQL often include practice problems with step-by-step solutions to enhance your skills.
