Key Components in the Nissan Pulsar Engine Diagram

Cylinder Block

The core of the engine, the cylinder block houses the cylinders and serves as the foundation for most internal components. Made from cast iron or aluminum alloy, it contains:

- Cylinders:** Where combustion occurs.
- Cooling passages:** To regulate engine temperature.
- Main bearing caps:** Support the crankshaft.
- Pistons and Connecting Rods**
 - Pistons:** Move up and down within the cylinders, converting combustion energy into mechanical motion.
 - Connecting rods:** Link the pistons to the crankshaft, transmitting force.
- Crankshaft**
 - The crankshaft converts the reciprocating motion of the pistons into rotational motion. It is supported by main bearings within the engine block and connected to the transmission via the flywheel.
- Cylinder Head**
 - Mounted atop the cylinder block, the cylinder head contains vital components such as:
 - Valves (intake and exhaust)**
 - Camshaft(s)**
 - Spark plugs**

The head seals the combustion chamber and allows air-fuel mixture intake and exhaust gases escape.

Valvetrain Components

- Camshaft(s):** Operate the valves via lobes.
- Valves:** Control intake of air and fuel; exhaust of combustion gases.
- Timing Belt/Chain:** Synchronizes camshaft rotation with the crankshaft, ensuring precise valve timing.

Fuel System Components

- Fuel Injectors:** Spray fuel into the intake manifold or combustion chamber.
- Fuel Pump:** Supplies fuel from the tank.
- Fuel Rail:** Distributes fuel to injectors.

Ignition System
