Sample Questions and Model Answers

To illustrate, here are some representative questions with detailed explanations:

Question 1: Which of the following materials is considered friable asbestos?
a) Vinyl flooring
b) Spray-applied insulation
c) Cement pipes
d) Asphalt shingles
Correct Answer: b) Spray-applied insulation
Explanation: Friable asbestos materials are those easily crumbled or reduced to powder by hand pressure. Spray-on insulation is a classic example of friable ACM, posing higher inhalation risks if disturbed. Cement pipes and vinyl flooring typically contain non-friable asbestos, which is less likely to release fibers unless damaged.

Question 2: According to OSHA regulations, what is the minimum respiratory protection level required during asbestos abatement activities?
a) Dust mask (NIOSH N95)
b) Half-face elastomeric respirator with HEPA filters
c) Full-face positive-pressure supplied-air respirator
d) Surgical mask
Correct Answer: c) Full-face positive-pressure supplied-air respirator
Explanation: OSHA mandates the use of high-level respiratory protection, such as supplied-air respirators, during asbestos removal, especially in high-risk situations. N95 masks are inadequate for asbestos due to their limited filtration capacity. Full-face respirators with HEPA filters are also acceptable but may be insufficient without positive-pressure systems in high-exposure scenarios.

Question 3: In the event of accidental disturbance of asbestos-containing material, what is the immediate action to take?
a) Continue work and monitor the area
b) Stop work immediately, evacuate the area, and inform the supervisor
c) Cover the disturbed area with plastic sheeting and proceed
d) Dust the area to settle fibers
Correct Answer: b) Stop work immediately, evacuate the area, and inform the supervisor
Explanation: Disturbing ACM can release hazardous fibers. Immediate evacuation and notification ensure that proper containment, cleanup, and assessment can occur, minimizing exposure risk.
